Reneal eLearning Lab Operations

Report 2: Detailed Lab Usage Analytics

School Name: Einoti Secondary School

Diagnostic Scope: 90-Day & 215-Day Windows

Cache System: Squid Proxy Server

Overall Rating: EXCELLENT

1. Diagnostic Window Analytics

Tracking data across 90-day and 215-day diagnostic blocks highlights high user retention, steady daily uptime, and continuous thin client terminal connectivity across all 40 deployed units.

Metric Window	Active Terminals	Avg Session Hours / Day	Squid Proxy Cache Hit Rate	System Uptime %
90-Day Diagnostic Block	40 / 40 Units	6.5 Hours	82.8%	99.1%
215-Day Diagnostic Block	40 / 40 Units	6.2 Hours	80.5%	98.6%

2. Network & Squid Proxy Efficiency

The Squid Proxy server delivers efficient resource caching, reducing latency for offline learning modules and supporting smooth simultaneous web application development sessions across all workstations.

3. Application & Resource Utilization Breakdown

eLearning Resource	Usage Frequency	Primary User Group	Resource Type
Khan Academy Lite	Daily High Volume	Mathematics & Science Students	Offline Interactive Tutorials
Wikipedia Offline Engine	Daily High Volume	Humanities & Science Classes	Digital Reference Repository
Web Development & Coding	3-4 Sessions / Week	ICT & Computer Clubs	HTML/CSS Practical Practice

4. Technical Diagnostics & Recommendations

Network latency remains consistently low. Continued monitoring of Squid Proxy cache hits ensures minimal server load during peak classroom hours.
