One improvement that can be made to the school computer system is installing Microsoft Windows instead of Ubuntu on some of the computers. Many teachers and students are more familiar with Windows, which makes it easier for them to use the computers during learning. In addition, national examinations are conducted using computers that operate on Microsoft Windows rather than Ubuntu. Therefore, installing Windows will help students become familiar with the same system used in national exams and prepare them better for their examinations.	1	0.78
